In the Claims:

Please amend claims 1, 8, 11-13, 15 and 20 as follow:

Claim 1. (Currently amended) A method of providing a portable information agent comprising:

presenting, **using data processing hardware**, a graphical representation of an original portable information agent as part of a first composition accessed **from a data**

memory by an initial application, said original portable information agent comprising a software object, having state, and having one or more ~~possible~~ external connections, said first composition providing a first execution context for said original portable information agent;

allowing replication of said portable information agent to a location ~~outside of~~ remote from said initial application; and

thereafter moving said replicated portable information agent to said ~~outside~~ remote location such that said replicated portable information agent becomes part of a second composition, said second composition providing a second execution context for said replicated portable information agent in which said state of said replicated portable information agent is preserved, a persistent link exists between the original portable information agent and the replicated portable information agent, and wherein said initial application comprises a web browser and said first composition is part of a web page.

Claim 8. (Currently amended) The method according to claim 1 wherein said ~~new~~ remote location is selected from the group consisting of: a desktop provided by an operating system, a different application, and a different computer platform with a different operating system.

Claim 11. (Currently amended) The method according to claim 1 wherein said allowing ~~relocation~~ replication comprises allowing a user to select and drag said graphical representation.

Claim 12. (Currently amended) The method according to claim 1 wherein said allowing ~~relocation~~ replication comprises allowing a user to discontinuously select said graphical representation and place said graphical representation in a new location.

Claim 13. (Currently amended) The method according to claim 1 wherein said allowing ~~relocation~~ replication comprises allowing said graphical representation to move to a new location without an action by a user.

Claim 15. (Currently amended) A method of interacting with a portable information agent comprising:

providing an original portable information agent object, using data processing hardware, as part of a first composition accessed by an initial application from a data memory, said original portable information agent object comprising a software object, having state, and having one or more external connections said first composition providing a first execution context for said portable information object;

allowing a user to select said original portable information agent object and replicate said original portable information agent object ~~outside of~~ remote from said initial application;

upon ~~detecting said relocating~~ selecting and replicating, determining if sufficient infrastructure logic exists to allow said replicated portable information agent object to operate in a new location;

if said determining indicates that sufficient infrastructure does not exist, contacting an agent server to request necessary infrastructure logic;

downloading and installing necessary infrastructure logic; and

thereafter moving said replicated portable information agent object to said new location such that said replicated portable information agent object becomes part of a second composition that provides a second execution context for said replicated portable information agent object;

wherein said initial application comprises a web browser and said first composition comprises a web page, and a persistent connection exists between the original portable information agent object and the replicated portable information agent object.

Claim 20. (Currently amended) The method according to claim 19 wherein said replicated portable information agent object and said infrastructure allow communication with a data server for tracking user interaction after said replicated portable information agent object has been moved to **[[a]] the** new location.
